

Aspirin or Aspirin Related Drugs

These instructions are to be followed before and after your surgery.

For a two-week period prior to and after the scheduled date of your surgery, please do not take any medication that contains aspirin or aspirin-related products, such as ibuprofen (Motrin, Advil) as an ingredient. Aspirin has an effect on your blood's ability to clot and could increase your tendency to bleed at the time of surgery and during the postoperative period.

Please check the labels of all medications that you take, even those available without a prescription, to make sure you are not taking any aspirin or aspirin-like substances.

Please consult your physician before stopping any prescribed medication.

The list on the next page is of the more common medications and substances that can increase your tendency to bleed.

If you are on any antirheumatoid, antiarthritic, circulation, or anticoagulant medication (e.g., Motrin, Naprosyn, Persantine, or Coumadin), please inform us.

If you need minor pain medication, please take acetaminophen (Tylenol) or another nonaspirin medication. Tylenol or Anacin-3 are available at your local pharmacy without a prescription and have comparable pain relief potential to that of aspirin. If you are allergic to acetaminophen, (Tylenol) or unable to take it for other reasons, please notify us so that we might arrange a suitable substitute.

List of Aspirin or Aspirin Related Drugs

4-Way Cold Tablets –	Cephalgesic	Indocin Capsules/ Suspension/Suppositories	Pamprin-IB Tablets
